

ClearPath CRM + Lead Flow

Document: 04 of 10 Phase: MVP Status: Complete Generated: 2026-04-04

Overview

The ClearPath CRM is not a separate tool — it is built directly into the Supabase database and managed through a lightweight admin view. The goal is to capture every lead from the Analyzer, route them correctly, and move them through a defined pipeline toward conversion into Asset Group clients (for Chicagoland leads) or future nurture (for all others).

Service Area Definition: The ClearPath Asset Group serves **Cook County, IL** — which includes Chicago proper and all Cook County suburbs (Tinley Park, Oak Forest, Oak Lawn, Matteson, Calumet City, Orland Park, Evergreen Park, etc.). Any property in Cook County qualifies for the Asset Group CTA and high-priority routing.

Detection method: Match county field from Google Maps/Zillow API response against `"Cook County"`.

Core Flow:

Analyzer Tool → Email Capture → Lead Tagged → Pipeline Stage → Follow-Up Action

Inputs (How Leads Enter)

SOURCE	TRIGGER	TAG APPLIED
Analyzer email gate	User submits email to unlock full results	<code>source:analyzer</code>
Asset Group contact form	User fills out form on <code>/asset-group</code>	<code>source:asset_group</code>
Content / social (Phase 2)	Link in bio, YouTube, newsletter	<code>source:content</code>

Lead Data Captured

Every lead record stores the following at capture:

```
-- Captured automatically
id            UUID            -- System generated
email         TEXT            -- Required
name          TEXT            -- Optional at capture (ask in follow-up)
created_at    TIMESTAMP       -- System generated

-- From the analysis session
analysis_id    UUID            -- Links to the analyses table
address        TEXT            -- Property they analyzed
is_service_area  BOOLEAN       -- TRUE if property is in Cook County, IL (Chicago + suburbs)
deal_arv        INTEGER       -- ARV from analysis
deal_flip_profit INTEGER       -- Flip profit from analysis
deal_cash_flow  INTEGER       -- Monthly cash flow from analysis
deal_signal     TEXT            -- 'green', 'yellow', 'red'
condition      TEXT            -- Rehab condition they selected

-- CRM fields (updated manually or via automation)
name           TEXT
phone          TEXT
status         TEXT            -- Pipeline stage (see below)
source         TEXT            -- 'analyzer', 'asset_group', 'content'
tags           TEXT[]          -- Array of tags
notes          TEXT            -- Internal notes
assigned_to    TEXT            -- Team member name (Phase 2)
last_contacted_at  TIMESTAMP
updated_at     TIMESTAMP
```

Lead Tagging System

Tags are applied automatically at capture and updated as leads progress.

Auto-Applied Tags (at capture)

CONDITION	TAG
Cook County address (Chicago + suburbs)	market:cook_county
Outside Chicagoland	market:national
Deal signal = green	signal:strong
Deal signal = yellow	signal:marginal
Deal signal = red	signal:weak
ARV > \$200,000	arv:high
Flip profit > \$30,000	flip:strong

Manually Applied Tags (by team)

Pipeline Stages

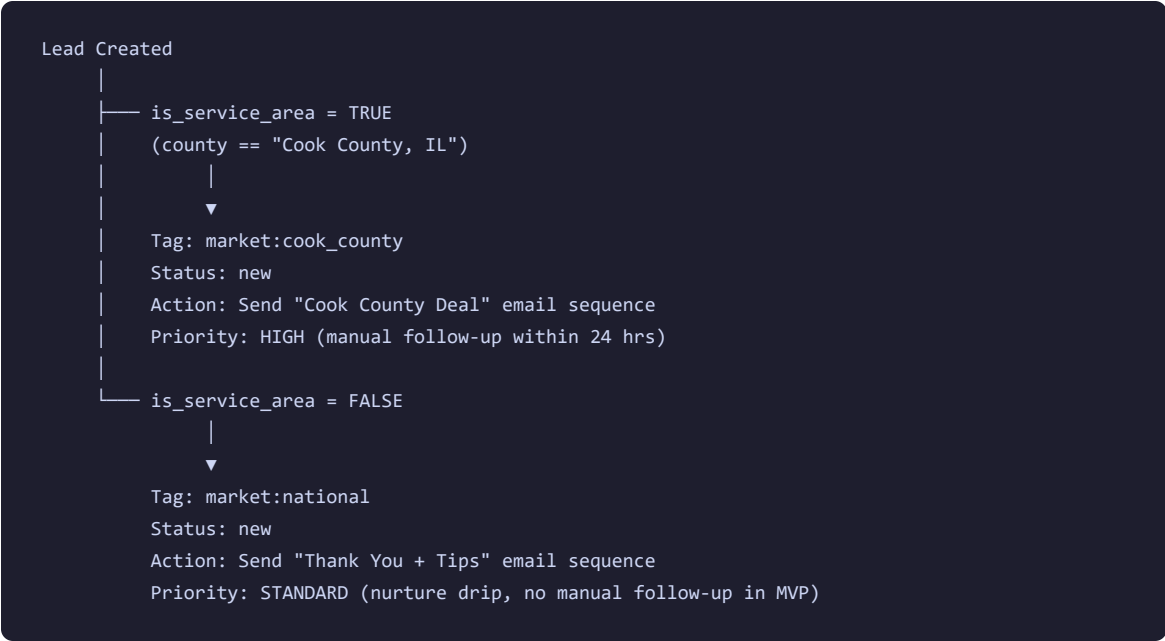

```
[NEW] → [CONTACTED] → [QUALIFIED] → [PROPOSAL SENT] → [CONVERTED] → [CLIENT]
                                                    ↘ [LOST]
```

STAGE	DESCRIPTION	WHO MOVES THEM
new	Lead just captured. No contact yet.	Automated
contacted	First email/message sent.	Automated (email)
qualified	Two-way communication. Investor is serious.	Manual (team)
proposal_sent	Asset Group scope sent to Chicago lead.	Manual (team)
converted	Client signed or deal agreed.	Manual (team)
client	Active client — project underway.	Manual (team)
lost	No longer interested or disqualified.	Manual (team)

nurture	Long-term follow-up only.	Automated (drip)
---------	---------------------------	------------------

Lead Routing Logic

The most critical fork: **Chicago vs. Non-Chicago**

Chicago Lead Priority Criteria

A Chicagoland lead should be flagged as **high priority** if ANY of the following are true:

CONDITION	FLAG
deal_signal = 'green' AND is_service_area = TRUE	● HIGH PRIORITY
flip_profit > \$25,000 AND is_service_area = TRUE	● HIGH PRIORITY
Source = asset_group (directly contacted us)	● HIGH PRIORITY
cash_flow > \$200 AND is_service_area = TRUE	● MEDIUM PRIORITY

Rule: High priority Chicago leads should receive a personal email or call within **24 hours**.

Lead Flow: Step by Step

Flow A: Analyzer Lead (Non-Chicago)

Step 1: User submits email on analyzer results page

Step 2: POST /api/leads fires

→ Lead inserted into DB with:

```
status: 'new'
source: 'analyzer'
is_service_area: false
tags: ['source:analyzer', 'market:national', ...deal signal tags]
```

Step 3: Resend API triggers "Welcome" email

→ Subject: "Your ClearPath deal analysis is ready"
 → Contains: Link back to their results, tips on reading the numbers
 → CTA: "Run another analysis" or "Join our investor list"

Step 4: Lead sits in 'new' stage

→ Drip sequence begins (Phase 2 automation)
 → No immediate manual follow-up required in MVP

Flow B: Analyzer Lead (Chicago)

Step 1: User submits email on analyzer results page

→ Cook County address detected (is_service_area = TRUE)
 → Detection: Google Maps API returns county = "Cook County, IL"

Step 2: POST /api/leads fires

→ Lead inserted with:

```
status: 'new'
source: 'analyzer'
is_service_area: true
tags: ['source:analyzer', 'market:cook_county', ...deal signal tags]
```

Step 3: Resend API triggers "Cook County Deal" email

→ Subject: "Your deal analysis + a note from our team"
 → Contains: Full results summary, Asset Group intro paragraph
 → CTA: "Learn how we execute Chicago deals" → /asset-group

Step 4: Internal notification sent to team

→ Email/Slack alert: "New Cook County lead: [address], Signal: [green/yellow/red]"
 → Link to lead record in admin view

Step 5: Team reviews within 24 hours

→ If strong deal: Move to 'contacted', send personal follow-up
 → If weak deal: Leave in nurture, no manual outreach

Flow C: Asset Group Direct Inquiry

Step 1: User fills out contact form on /asset-group

→ Inputs: Name, Email, Phone (required), Property Address, Message

```

Step 2: POST /api/leads fires
  → Lead inserted with:
    source: 'asset_group'
    status: 'new'
    tags: ['source:asset_group', 'market:cook_county']

Step 3: Auto-reply email sent
  → Subject: "We got your message — here's what's next"
  → Contains: What to expect, typical timeline, what deals we take

Step 4: HIGH PRIORITY internal alert fires immediately
  → "New direct inquiry from [name]: [message]"

Step 5: Team responds within 24 hours
  → Discovery call booked
  → Move status to 'contacted'

```

CRM Admin View (MVP)

In MVP, the admin view is a filtered Supabase Table View or a simple internal page.

Default Filter: `status != 'lost' AND status != 'nurture'`

Columns Visible:

- Email
- Address
- is_service_area (checkbox — Chicagoland metro)
- deal_signal (● ● ●)
- flip_profit
- cash_flow
- source
- status
- created_at
- last_contacted_at

Sort: `is_service_area DESC, deal_signal ASC, created_at DESC` (Chicagoland leads with strong signals always appear at the top)

Actions (manual):

- Update status
 - Add tags
 - Add notes
 - Mark as contacted
-

Lead Qualification Criteria

A lead becomes "Qualified" when they meet:

CRITERION	MINIMUM THRESHOLD
Engaged in 2-way communication	Yes
Has capital to fund a deal	\$50,000+ (Chicago)
Deal signal is green or yellow	Yes
Property in Chicagoland metro (6 counties)	Yes (for Asset Group)

Leads that don't meet criteria → Move to **nurture** or **lost** .

Key Metrics to Track

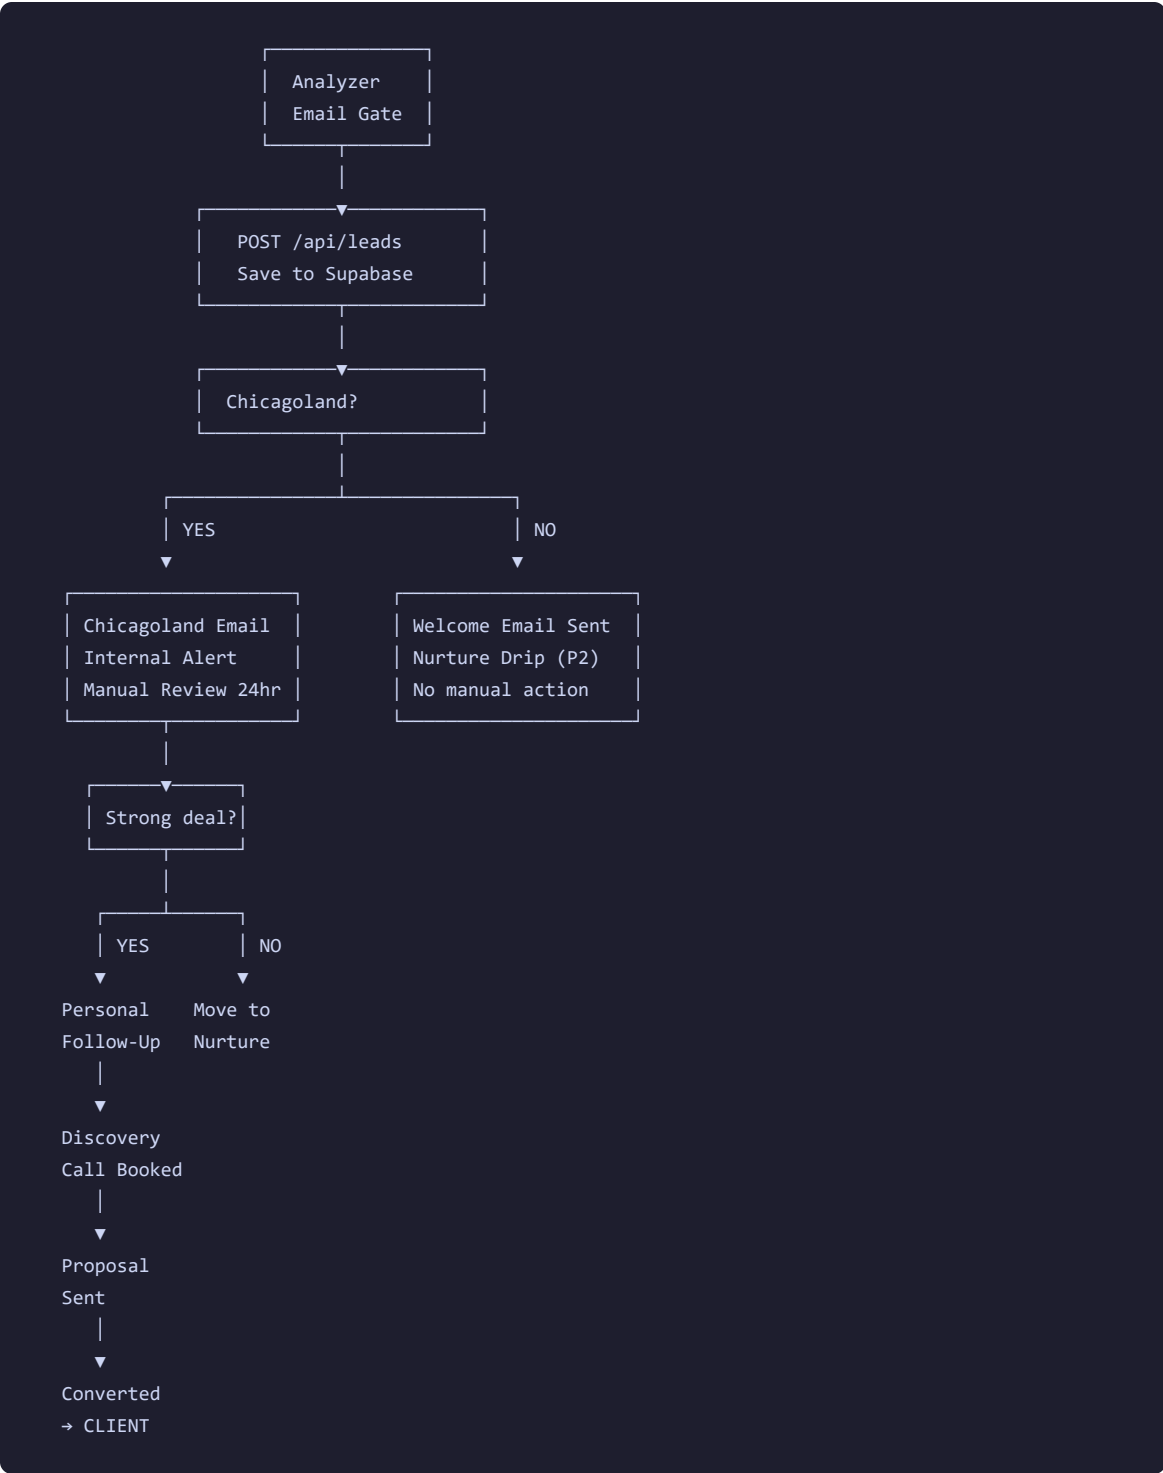

METRIC	FORMULA	TARGET
Lead Capture Rate	Emails captured / Total analyses run	> 25%
Chicago Lead Rate	Chicago leads / Total leads	Track only
Chicago Conversion Rate	Clients / Chicago leads	> 5%
Time to First Contact	Avg hours from capture to team outreach	< 24 hrs
Pipeline Velocity	Avg days from new to qualified	< 7 days

Tools Required

TOOL	PURPOSE	MVP?
Supabase	Lead database + pipeline tracking	✔ Yes
Resend	Transactional emails	✔ Yes
Supabase Table View	Manual CRM admin in MVP	✔ Yes
Internal email/Slack alert	New Chicago lead notifications	✔ Yes
Calendly	Discovery call booking (Asset Group)	✔ Yes
HubSpot / GoHighLevel	Full CRM (if volume grows)	✗ Phase 2

Automated drip sequences	Email nurture for non-Chicago	✖ Phase 2
--------------------------	-------------------------------	-----------
