

ClearPath Email + SMS Automation

Document: 05 of 10 Phase: Phase 2 Status: Complete Generated: 2026-04-04

Overview

The ClearPath automation system is designed to convert attention (Analyzer tool) into trust and execution (Asset Group service). It operates on two tracks:

- 1. **The Cook County Track:** High-touch, local, and sales-focused.
- 2. **The National Track:** Educative, brand-focused, and long-term nurture.

Automation Tooling:

- **Email:** Resend (Transactional) + MailerLite/ActiveCampaign (Nurture).
- **SMS:** Twilio API (via Supabase Edge Functions).
- **Triggers:** Supabase Database Webhooks.

Automation Triggers

EVENT	CONDITION	ACTION
Lead Captured (National)	is_service_area == false	Trigger "National Welcome" Sequence
Lead Captured (Cook County)	is_service_area == true	Trigger "Cook County Priority" Sequence + Internal Alert
High Profit / Green Deal	deal_signal == 'green' AND is_service_area == true	Trigger Immediate SMS Alert to Team + User
Asset Group Inquiry	source == 'asset_group'	Trigger "Asset Group Consultation" Sequence

Sequence 1: The Cook County Priority (Sales Focus)

Goal: Convert the analysis into a strategy call. Target: Leads who analyzed a property in Cook County (Chicago, Tinley Park, Bolingbrook, etc.).

STEP	TIMING	CHANNEL	CONTENT / SUBJECT
Step 1	Immediate	Email	Subject: Your Cook County Analysis + How we can help. Summary of the deal + Intro to Asset Group service.
Step 2	+5 Mins	SMS	To Lead: "Hi [Name], I saw you just ran an analysis on [Address]. That's a solid area. Would you like a more detailed rehab estimate for it? - [Name], ClearPath"
Step 3	Day 1	Email	Subject: How we handled a similar rehab in [Area/County]. Case study of a Cook County project. Focus on stabilization.
Step 4	Day 3	Email	Subject: Questions about your [Address] analysis? Reach out directly for a 10-min strategy call. [Calendly Link]
Step 5	Day 7	Email	Subject: Cook County Market Update. Value-add content about local inventory and rehab costs.

Sequence 2: The National Nurture (Brand Focus)

Goal: Build authority and keep the tool top-of-mind. **Target:** Leads outside the service area.

STEP	TIMING	CHANNEL	CONTENT / SUBJECT
Step 1	Immediate	Email	Subject: Your Deal Analysis Breakdown. Full results link + "How to read these numbers" guide.
Step 2	Day 2	Email	Subject: The "70% Rule" and why it matters. Educational content on calculating MAO like a pro.
Step 3	Day 5	Email	Subject: 3 things that kill a deal (And how to spot them). Red flag detection in listings.
Step 4	Day 10	Email	Subject: Looking for boots on the ground? How to find partners in your local market.
Step 5	Monthly	Email	Subject: ClearPath Monthly Digest. Top analyzed zip codes + New analyzer features.

Sequence 3: Direct Service Inquiry (Asset Group)

Goal: Close the lead for a rehab/stabilization project.

STEP	TIMING	CHANNEL	CONTENT / SUBJECT
------	--------	---------	-------------------

Step 1	Immediate	Email	Subject: We received your inquiry - Next Steps. Acknowledgment + Request for 1-2 photos or listing link.
Step 2	+15 Mins	SMS	To Team: "NEW DIRECT LEAD: [Name] for [Address]. Call them ASAP."
Step 3	Day 2	Email	Subject: (If no response) Still interested in discussing [Address]? Quick check-in from the project manager.

SMS Automation Logic (Team & User)

1. High-Priority Internal Alerts

When a "Green Signal" deal in Cook County is identified:

- **Trigger:** `is_service_area == true AND deal_signal == 'green'`
- **To Team:** "🔥 HOT DEAL ALERT: [Email] just analyzed [Address] - Net Profit: \$[Profit]. Call them now."

2. User Follow-up (Cook County Only)

- **Trigger:** 5 minutes after analysis completion.
- **To User:** "Hey there, noticed you were looking at [Address] on ClearPath. I know that block well. Are you planning to flip or hold it? - [Name]"

Technical Implementation (Pseudocode)

Triggering Sequences (Supabase Webhook)

```
// Supabase Edge Function: handle-new-lead
export const onRequest = async (req) => {
  const { record } = await req.json();

  if (record.is_service_area) {
    // Start Cook County Sequence
    await startResendSequence(record.email, 'cook_county_flow');

    if (record.deal_signal === 'green') {
      await sendInternalSms(`🔥 Hot Deal: ${record.address}`);
    }
  } else {
    // Start National Sequence
    await startResendSequence(record.email, 'national_nurture');
```

Cadence & Maintenance

- **A/B Testing:** Regularly test subject lines for "Step 1" in both sequences.
 - **Unsubscribe Logic:** Ensure "Unsubscribe" in email automatically stops all automated SMS for that lead.
 - **Hand-off:** If a lead replies to an email or SMS, they must be manually tagged as **contacted** in the CRM, which **pauses** the automated sequence.
